

Vendors and 3rd Party Software

CDFIs and CDEs may use any software to track and submit the TLR. Existing systems may need to be upgraded to include fields for all of the CIIS data points. The Fund provides software developers and vendors the technical information needed to upgrade in-house or off-the-shelf products to enable CDFIs and CDEs to track and electronically submit all of the data points collected by CIIS. Below is a list of available vendor software:

Ariel Ventures, LLC

Radhika Reddy

Ph: (216) 344-9441

rr@arielventures.com

Vendor Testing Opportunities

The Fund and i360 Technologies welcome CDFIs, CDEs, and software developers to test their software against CIIS requirements. The purpose of software vendor testing is to establish that CIIS can receive and process the transaction level report (TLR) submitted by a vendor's application software package. Software will be certified as CIIS Compatible when the application testing is successfully concluded and has demonstrated that (i) the software is capable of transmitting every TLR data point via XML transfer and (ii) the data can be uploaded to CIIS in the correct format without any manual re-entry of data by the software user.

Completion of interface testing does not indicate that the Fund or i360 Technologies endorses, warrants, or assumes any responsibility or liability for, in any manner whatsoever, the vendor's software package.

CDFIs and CDEs that use off-the-shelf software products are encouraged to contact their software vendor(s) to inform them of this testing opportunity. CDFIs and CDEs with custom-designed software are invited to contact i360 Technologies to discuss testing opportunities.

For more information or to schedule testing, please contact i360 Technologies at ciishelp@i360technologies.com.
